Contents

Introduction and Acknowledgements

Session 1: Wind characteristics and description

Introductory remarks
A.J. Bowen *28*, 3

Extreme wind climate of the United Kingdom
N.J. Cook and M.J. Prior *28*, 11

Integral length scales in strong winds below 20 m
R.G.J. Flay and D.C. Stevenson *28*, 21

Power spectra of longitudinal and lateral wind speed near the ground in strong winds
J. Maeda and M. Makino *28*, 31

The structure of turbulence during strong winds
H. Lösslein *28*, 41

Turbulent properties and spectral behaviours of ocean winds observed at an off-shore tower
G. Naito *28*, 51

Extreme wind speed distributions for tropical cyclones
D. Delaunay *28*, 61

Extreme winds generated from short records in a tropical cyclone-prone region
E.D.H. Cheng and A.N.L. Chiu *28*, 69

Observed effects of topography on the wind field of cyclone Winifred
G.R. Walker, G.F. Reardon and E.D. Jancauskas *28*, 79

Discussion of Session 1
J. Wieringa *28*, 89

Session 2: Wind environment

Introductory remarks
J.E. Cermak *28*, 99

Wind tunnel measurement of velocity profiles in complex terrain. Case of Alpine regions
J.-A. Hertig *28*, 105

Simple approximations for wind speed-up over hills
D.R. Lemelin, D. Surry and A.G. Davenport *28*, 117

Study on the assessment of environmental wind conditions at ground level in a built-up area—based on long-term measurements using portable 3-cup anemometers
M. Ohba, N. Kobayashi and S. Murakami *28*, 129

A wind tunnel test on the boundary layer characteristics above an urban area
T. Maruyama and H. Ishizaki *28*, 139

Environmental wind characteristics around the base of a tall building — a comparison between model test and full scale experiment
S. Kawamura, E. Kimoto, T. Fukushima and Y. Taniike *28*, 149

Sediment-laden velocity profiles developed in a long boundary-layer wind tunnel
L.F. Janin and J.E. Cermak *28*, 159

Discussion of Session 2
J.A. Hertig *28*, 169

Session 3: Fundamental studies

Introductory remarks
G.V. Parkinson *28*, 177

Review of interference-induced oscillations in flow past two parallel circular cylinders in various Arrangements
M.M. Zdravkovich *28*, 183

Vortex shedding from two cylinders in tandem
T. Albrecht, F.H. Barnes, A.J. Baxendale and I. Grant *28*, 201
Direct measurements of oscillating lift on a rigid square section cylinder in a turbulent stream
F. Namiranian and I.S. Gartshore *28*, 209
Effect of end plates on the flow around rough cylinders
C. Farell and S.K. Fedeniuk *28*, 219
Reconstruction of instationary wind load distribution on structures from measured structural response time histories
D. Holzdeppe and H. Öry *28*, 231
Detailed pressure field measurements for some 2-D rectangular cylinders
F.A. Da Matha Sant'Anna, A. Laneville, J.Y. Trépanier and Z.Y. Lü *28*, 241
The effects of turbulence on bluff-body mean flow
Y. Nakamura, Y. Ohya and S. Ozono *28*, 251
Bluff body aerodynamics in pulsating flow
M. Matsumoto, N. Shiraishi and H. Shirato *28*, 261
The use of a forebody plate to reduce the drag and to improve the aerodynamic stability of a cylinder of square cross-section
K.R. Cooper *28*, 271
Stability of wind-loaded cylindrical shells
R.K. Kapania and T.Y. Yang *28*, 281
The separated shear layers associated with hemispherical bodies in turbulent boundary layers
E. Savory and N. Toy *28*, 291
On a mechanism of vortex excited oscillations of a cylinder
E. Berger *28*, 301
Discussion of Session 3
E. Plate *28*, 311

Session 4: High rise buildings
Aeroelastic behavior of tall buildings in wakes
Y. Taniike and H. Inaoka *28*, 317
Structural response to wind with soil–structure interaction
M. Novak and L. El Hifnawy *28*, 329
Dynamic response of nine similar tower blocks
B.R. Ellis and J.D. Littler *28*, 339
Correlation of the components of wind-loading on tall buildings
S.T. Thoroddsen, J.A. Peterka and J.E. Cermak *28*, 351
Perception of vibration — test in a tall building
A.P. Jearry, R.G. Morris and R.W. Tomlinson *28*, 361
On aerodynamic stability effects for bluff rectangular cylinders by their corner-cut
N. Shiraishi, M. Matsumoto, H. Shirato and H. Ishizaki *28*, 371
Effect of building shape on wind-induced response of tall buildings
K.C.S. Kwok *28*, 381
Aerodynamic device for suppressing wind-induced vibration of rectangular section structures
K. Ogawa, Y. Sakai and F. Sakai *28*, 391
Reducing the wind loading on large cantilevered roofs
W.H. Melbourne and J.C.K. Cheung *28*, 401

Session 5: Low rise structures—local wind loads
Introductory remarks
C. Kramer *29*, 3
Wind loading on a porous roof
J.C.K. Cheung and W.H. Melbourne *29*, 19

Prediction of wind-induced failure of loose laid roof cladding systems
R.J. Kind, M.G. Savage and R.L. Wardlaw *29*, 29
Wind loads on permeable roof-blocks in roof insulation systems
T. Amano, K. Fujii and S. Tazaki *29*, 39
Wind tunnel tests and equivalent 1-minute loads for the design of cladding glass
E. Simiu and E.M. Hendrickson *29*, 49
Distribution of peak wind loads on a low-rise building
J.D. Holmes *29*, 59
Pressure model techniques for cladding loads
P.A. Irwin *29*, 69
Roof corner wind loads and parapet configurations
A. Baskaran and T. Stathopoulos *29*, 79
Load reduction on flat roofs—the effect of edge profile
P.A. Blackmore *29*, 89
Brerwulf—the big bad wolf
N.J. Cook, A.P. Keevil and R.K. Stobart *29*, 99
Wind loading and fatigue behaviour of fixings and bondings of roof coverings
H.J. Gerhardt and C. Kramer *29*, 109
Discussion of Session 5
N.J. Cook *29*, 119

Session 6: Low rise structures—wind shelter and wind drifting
Introductory remarks
R.J. Kind *29*, 137
Shelter effect on a row of coal piles to prevent wind erosion
A.R. Borges and D.X. Viegas *29*, 145
Experimental study on characteristics of flow past porous fences
K.G. Ranga Raju, R.J. Garde, S.K. Singh and N. Singh *29*, 155
Wind tunnel tests as part of a warning system for accidental gaseous spills
E.J. Plate and W. Baechlin *29*, 165
A method for estimating the distribution range of trajectories of wind-borne missiles
M. Tachikawa *29*, 175
Discussion of Session 6
H.J. Gerhardt *29*, 185

Session 7: Low rise structures—wind loading and flow field
Introductory remarks
K.C. Mehta *29*, 197
Wind-tunnel modeling of the flow about bluff bodies
R.N. Meroney *29*, 203
Computation of wind loads on a semicircular greenhouse
E.H. Mathews and J.P. Meyer *29*, 225
The effect of non-linear structural behaviour on wind-induced plastic damage of low-rise buildings
P.N. Georgiou, B.J. Vickery and D. Surry *29*, 235
On the failure of single-story wood-framed houses in severe storms
P.R. Sparks, M.L. Hessig, J.A. Murden and B.L. Sill *29*, 245
Wind induced response of low-profile cable-reinforced air-supported structures
Y. Mataki, Y. Iwasa, Y. Fukao and A. Okada *29*, 253
Pressure distributions on semi-cylindrical structures of different geometrical cross-sections
N. Toy and B. Tahouri *29*, 263
The effects of scale distortion on total wind loads on a low rise building model
R.J. Roy and J.D. Holmes *29*, 273

Wind effects on designing ventilation flow rate of large spaces with many openings
N. Kobayashi and M. Ohba *29*, 283
Stack effect and building internal pressure
H. Tanaka and Y. Lee *29*, 293
Ventilation and heat and smoke extraction from industrial buildings
C. Kramer and H.J. Gerhardt *29*, 303
Discussion of Session 7
J.D. Holmes *29*, 315

Session 8: Engineering structures—bridges
Introductory remarks
R.H. Scanlan *29*, 329
On bridge response build-up beyond the critical wind velocity for stability
R.H. Scanlan *29*, 333
The effects of fairing sand of turbulence on the flutter derivatives of a notably unstable bridge deck
D.R. Huston, H.R. Bosch and R.H. Scanlan *29*, 339
The validity of sectional models on wind tunnel tests for vortex induced oscillation of bridges
F. Nagao and H. Utsunomiya *29*, 351
Motion of the separation bubble and heaving responses of vortex induced oscillation of bridge decks
H. Yamada and T. Miyata *29*, 361
Mechanism of vortex-excited oscillations of a bridge deck
H. Kobayashi, B. Bienkiewicz and J.E. Cermak *29*, 371
Preliminary design considerations for wind effects on a very long-span suspension bridge
T. Miyata, I. Okauchi, N. Shiraishi, N. Narita and T. Narahira *29*, 379
CVR method for identification of nonsteady aerodynamic model
J. Xie *29*, 389
Aerodynamic characteristics of continuous box girder bridges relevant to their vibrations in wind
N. Narita, K. Yokoyama, H. Sato and Y. Nakagami *29*, 399
Rain–wind induced vibrations of cables in cable stayed bridges
Y. Hikami and N. Shiraishi *29*, 409
Aerodynamic study on a proposed cable-stayed bridge in Shanghai, China
H. Xiang, J. Xie and Z. Lin *29*, 419
Discussion of Session 8
G. Sedlacek *29*, 429

Session 9: Engineering structures—towers, cables, wind pressures and fatigue
Introductory remarks
W.H. Melbourne *30*, 3
The response of latticed steel towers due to the action of wind
K. Hiramatsu and H. Akagi *30*, 7
Three-dimensional behavior of galloping in telecommunication cables of figure-8 section
Y. Fujino, M. Ito and H. Yamaguchi *30*, 17
Along-wind response of line-like structures
S.O. Hansen and C. Dyrbye *30*, 27
Statistics of full-scale surface pressures
R.V. Milford and J.L. Waldeck *30*, 35
A simple relationship between the gust response factor and fatigue damage
M. Dionne and A.G. Davenport *30*, 45
Investigation of wind-induced fatigue in tall guyed steel masts
M.J. Lambert, M.H. Ogle and B.W. Smith *30*, 55

On the correlation of dynamic wind loads and structural response of natural-draught cooling towers
M. Kasperski and H.-J. Niemann *30*, 67
Detuning of wind-induced vibrations of cooling tower shells
W.B. Krätzig and Z. Sanal *30*, 77
Damping of wind induced oscillations through liquid sloshing
V.J. Modi and F. Welt *30*, 85
An assessment of the role of geometric imperfections in the collapse of the fiddlers ferry cooling tower
A.J. Fricker *30*, 95
Discussion of Session 9
V.J. Modi *30*, 105

Session 10: Codification
The new Italian recommendations for wind loads on structures: basic assumptions and critical considerations
G. Ballio and G. Solari *30*, 123
The current Chinese code on wind loading and comparative study of wind loading codes
X. Zhang *30*, 133
Codification of lcoal pressure coefficients for low-rise structures
A.P. Robertson *30*, 143
Comparisons of estimated dynamic along-wind responses
B.E. Lee and W.K. Ng *30*, 153
A simplified wind loading code for small buildings in tropical cyclone prone areas
G.R. Walker *30*, 163
Crosswind vibrations of steel stacks. Critical comparison between some recently proposed codes
H. Ruscheweyh and G. Sedlacek *30*, 173
Discussion of Session 10
E. Simiu *30*, 185

Session 11: Wind engineering and hazard
Windstorm hazard and insurance
G. Berz and A. Smolka *30*, 191
Maximum wind speed estimation for arbitrary month periods in Japan
J. Kanda *30*, 205
An analytical model of the wind-induced spread of forest fires
M.F. Letelier, S., J. Valdivia M. and H.J. Leutheusser *30*, 215
Influence of mean wind speed, surface roughness and structural damping on the reliability of wind loaded buildings
G.I. Schuëller, C.G. Bucher and P.H.W. Prenninger *30*, 221
Effect of parametric uncertainties on wind excited structural response
A. Kareem *30*, 233
Discussion of Session 11
P.R. Sparks *30*, 243
Appendix 1: Minutes of the IWEA steering committee *30*, 247
Appendix 2: Conference organizing committee *30*, 259
Appendix 3: Conference delegates *30*, 261
